Executive Summary

OneX Smart Gold (OSG) is a gold-inspired, fixed-supply decentralized-finance token deployed on the Polygon Mainnet — pairing the discipline of a Bitcoin-style emission schedule with the accessibility of modern DeFi participation rewards.

The OSG ecosystem runs on eight fully verified smart contracts that let users earn participation rewards through staking, commit value through a structured bond program, grow communities through a built-in five-level referral structure, and govern the protocol through a TimelockDAO with an enforced delay before any change can take effect.

23M

FIXED SUPPLY

8

VERIFIED CONTRACTS

3 Yr

HALVING CYCLE

Polygon

NETWORK

Key Highlights

- ▶ **Fixed Supply:** a permanently capped 23,000,000 OSG — no inflationary minting beyond the pre-defined emission schedule.
- ▶ **Pre-Allocated Emissions:** all participation rewards are distributed from a controlled emission pool with hard hourly and daily mint caps as circuit-breakers.
- ▶ **Bitcoin-Style Discipline:** a long-term emission schedule with periodic halving events (every 3 years) ensures predictable, decreasing issuance.
- ▶ **Structured Bond Program:** fixed-term commitment tiers with defined annual reward rates and time-based pro-rata accrual.
- ▶ **Founder Vesting:** the 2% team allocation is held in a dedicated vesting wallet to align long-term incentives.
- ▶ **Mobile-First & Low-Cost:** built on Polygon for fast, low-fee, wallet-friendly access worldwide.

Vision & Mission

Our Vision

To build a globally accessible, gold-inspired digital asset that unites the timeless principle of scarcity with the participation-driven incentives of decentralized finance — empowering anyone with a wallet to engage with a transparent, sustainable financial ecosystem.

Our Mission

To deliver a secure, transparent, community-governed DeFi protocol where participants earn rewards for genuine engagement — built on disciplined tokenomics, verifiable open-source contracts, and decentralized governance.

Core Values

Security First

Every contract verified and governed by a TimelockDAO.

Transparency

All operations on-chain and publicly auditable on Polygonscan.

Global Access

Borderless participation for anyone with a Web3 wallet.

Sustainability

Reward models designed for long-term viability, not hype.

Community

Growth driven by and shared with the community.

Scarcity

Fixed supply and halving mechanics protect long-term value.

The Problem

Traditional finance and many DeFi projects share fundamental flaws that erode trust and long-term value.

Challenges in Traditional Finance

- ▶ Inflation Erosion: fiat currencies steadily lose purchasing power over time.
- ▶ Limited Access: gold and premium assets remain out of reach for many globally.
- ▶ Intermediaries: banks and brokers add cost, delay, and gatekeeping.

Challenges in Existing DeFi

- ▶ Unsustainable Models: many projects rely on inflationary minting that dilutes holders.
- ▶ Opaque Mechanics: closed-source contracts can hide malicious behaviour.
- ▶ Centralized Control: hidden admin keys enable sudden, harmful changes.
- ▶ Empty Hype: marketing-driven tokens with no real structure or discipline.

OSG directly addresses each of these — through a fixed supply, capped emissions, fully verified open-source contracts, and decentralized TimelockDAO governance with enforced delays.

The OSG Solution

OSG delivers a complete, integrated ecosystem that answers the core problems of both traditional finance and existing DeFi.

Gold-Inspired Scarcity

A fixed 23M supply designed as a disciplined digital store of value, immune to inflationary dilution.

Verified & Secure

All eight contracts open-source and verified on Polygonscan (Solidity 0.8.34, EVM Cancun).

Sustainable Rewards

Participation rewards distributed from a capped emission pool with built-in mint circuit-breakers.

Structured Bonds

Fixed-term, contract-held bond tiers paying defined annual rates with auto-compounding.

Community Growth

A capped, anti-abuse five-level referral structure built directly into the staking contract.

Fair Governance

A TimelockDAO with enforced delays ensures no instant, unilateral control.

Ecosystem Architecture

Eight interconnected smart contracts, each with a dedicated role, all deployed and verified on Polygon Mainnet (chain ID 137).

Optimization: 200 runs

Network: Polygon (137)

Standard: ERC-20 · 18 decimals

Always verify official contract addresses through the channels listed in Section 14 before interacting with the protocol.

Contract Capabilities — Full Disclosure. For complete transparency, OSG discloses that its verified contracts retain three by-design administrative capabilities, all enforceable only through the 24h TimelockDAO: (1) controlled minting by the Reward Pool, strictly bounded by the immutable 23M cap and hard hourly/daily limits; (2) an emergency pause to protect users during incidents; and (3) timelock-governed parameter control. These are intentional safety and governance features — not hidden backdoors — and every action is publicly visible on Polygonscan.

EARN · HOLD · BOND · VOTE · REFER · CHAT · GROW · USE

Tokenomics & Emission Model

OSG follows a fixed-supply emission model inspired by Bitcoin's halving discipline.

23,000,000

FIXED SUPPLY

3 Years

HALVING CYCLE

15 Years

EMISSION WINDOW

⚠ Emission Clarification — The protocol mints rewards only from a controlled emission schedule, protected by immutable hard caps (a maximum per-hour and per-day mint limit) that act as circuit-breakers. Total supply can never exceed 23,000,000 OSG.

Emission Split (Daily Rewards)

Each day's reward emission is divided between protocol activities as configured in the Reward Pool:

Supply Allocation

Supply & Allocation — The total supply is permanently capped at 23,000,000 OSG, with all reward emissions governed on-chain by the verified Token and Reward Pool contracts and bounded by immutable hard mint caps. Of the fixed supply, 460,000 OSG (2%) is allocated to the team Vesting wallet. All allocation and emission parameters are publicly verifiable on Polygonscan.

Staking & Participation Rewards

OSG staking is a single shared-emission pool. Your reward is proportional to your share of the total staked supply — funded entirely by the daily emission schedule, never by uncapped minting.

How it actually works. There are no fixed APY "tiers." Each day, 70% of the emission base is allocated to staking and shared across all stakers in proportion to their stake. As more users stake, the same daily emission is divided among more participants; as halvings reduce emission every 3 years, daily rewards decrease accordingly.

10

MIN STAKE (OSG)

12h

UNSTAKE COOLDOWN

1

MIN CLAIM (OSG)

10,000

MAX / CLAIM (OSG)

How Participation Works

- ▶ **Stake:** lock any amount of OSG (minimum 10) through the OSG DApp — no fixed lock term.
- ▶ **Earn:** rewards accrue continuously, proportional to your share of total staked OSG.
- ▶ **Claim:** withdraw accrued rewards (minimum 1 OSG; up to 10,000 OSG per claim, processed in safe chunks).
- ▶ **Unstake:** request an unstake, then withdraw your full principal after a 12-hour cooldown.

Note on terminology: reward rates are protocol participation incentives funded by a finite emission pool — not guaranteed returns. Emission parameters may be adjusted through TimelockDAO governance to protect long-term sustainability.

Built-in Referral Program

A transparent, capped five-level referral system — built directly into the OSG Staking contract, not a separate module. Referral rewards are earned only from referred stakers' participation rewards, never from anyone's principal.

LEVEL	REWARD RATE	DESCRIPTION
Level 1	5.0%	Direct referrals you invite
Level 2	3.0%	Second-generation network
Level 3	2.0%	Third-generation network
Level 4	1.0%	Fourth-generation network
Level 5	0.5%	Fifth-generation network

Anti-Abuse & Sustainability Rules

- ▶ Rewards Source: calculated only on a referred user's staking reward — never on staked principal.
- ▶ Eligibility Gate: a referrer must hold at least 100 OSG staked and have been active for a minimum period before earning.
- ▶ Anti-Circular & Anti-Self: circular and self-referrals are rejected on-chain by the contract.
- ▶ On-Chain & Transparent: all referral logic is enforced inside the verified OSG Staking contract.

This ethical, capped model rewards genuine community growth without compromising long-term token sustainability.

OSG Bond Program

A structured, fixed-term bond program for committed long-term participants — offering defined annual reward rates with time-based pro-rata accrual and automatic compounding. All funds are held directly by the verified Bond contract.

✓ **Treasury funded:** 50,000 OSG has been committed directly to the Bond contract from the project treasury. The Bronze tier is fully backed and live for participation, with Silver and Gold tiers funded progressively as demand grows.

BRONZE

FUNDED

8%

Annual Reward Rate

12-month lock
Min 1,000 OSG

SILVER

11%

Annual Reward Rate

24-month lock
Min 5,000 OSG

GOLD

14%

Annual Reward Rate

36-month lock
Min 10,000 OSG

How Bonds Work

- ▶ **Commit:** lock OSG into a fixed-term tier (12, 24, or 36 months) through the OSG DApp.
- ▶ **Accrue:** rewards accrue continuously at the annual rate, pro-rated by exact time elapsed.
- ▶ **Claim Monthly:** claimable once every 30 days. By default 50% is paid out and 50% is auto-restaked (compounded into your bond).
- ▶ **Maturity:** principal plus all compounded rewards are returned in full once the term completes. No early withdrawal.

Solvency-safe by design. The Bond contract separately tracks active principal and compounded rewards, so emergency-sweep functions can never touch users' locked funds. The contract is funded directly from the pre-allocated treasury (currently 50,000 OSG) — it never mints.

⚠ **Important:** bond reward rates are protocol participation incentives, not guaranteed financial returns. All bond logic is enforced on-chain and governed by TimelockDAO. Review the Risk Disclosure before committing.

DAO Governance & Security

OSG's strongest trust foundation is its TimelockDAO — ensuring no single party can make sudden, harmful changes to the protocol.

TimelockDAO

Every critical change is queued and subject to an enforced minimum delay (24 hours) before it can execute.

Layered Timelocks

Sensitive actions — such as authorizing a new minter — require an additional 72-hour token-level delay on top of DAO delay.

Review Window

Mandatory waiting periods give the community time to review and react to every proposal.

Emergency Pause

Core contracts can be paused in emergencies to protect user assets.

Governance Process

- ▶ **Queue:** changes are submitted to TimelockDAO with full on-chain transparency and a unique transaction ID.
- ▶ **Delay:** a mandatory timelock (24h minimum) — extended further for the most sensitive actions — allows community review.
- ▶ **Execute:** only after the delay can a change be executed, and only by the authorized governance account.
- ▶ **Emergency Controls:** pause functions protect the ecosystem during unforeseen events.

Every governance action is visible, delayed, and accountable — providing institutional-grade security and trust for all participants.

OSG Messenger & Future Utilities

Beyond DeFi, OSG is evolving into a complete Web3 utility ecosystem — beginning with on-chain, wallet-to-wallet messaging that is already live on Polygon Mainnet.

✓ **Live today:** on-chain text messaging between wallets via the OSG Messenger contract, now with end-to-end encryption (X25519 ECDH + AES-256-GCM) — all with confirmed transactions on Polygonscan.

OSG Messenger

On-Chain Text Chat · LIVE

Wallet-to-wallet messages recorded and verifiable on Polygon.

End-to-End Encryption · LIVE

X25519 ECDH key exchange with AES-256-GCM encryption — messages are private wallet-to-wallet, live and tested on the DApp.

Encrypted Photo Sharing · LIVE

End-to-end encrypted photo sharing via IPFS with on-chain hash verification, live and tested on the DApp. File & video sharing — planned.

Group Channels · planned

Wallet-based group creation with admin controls.

Disclaimer: features marked "planned" are aspirational and under active development. Timelines and features are subject to change and are not guaranteed.

Roadmap

A clear path from genesis to a complete global DeFi ecosystem.

PHASE 1 · Q1-Q2 2026 · COMPLETE

Genesis & Deployment

Eight smart contracts deployed and verified on Polygon Mainnet. TimelockDAO activated. Staking, referral, bond, and on-chain messenger live.

PHASE 2 · Q2 2026 · IN PROGRESS

Ecosystem Activation

OSG DApp launch, Reward Pool v2 (chunked claim) migration, Bond Program activation, liquidity provisioning, and community growth.

PHASE 3 · Q3 2026

OSG Messenger Expansion

Encrypted media messaging with IPFS storage, group channels, and in-chat OSG payments.

PHASE 4 · Q4 2026

Global Expansion

Exchange listing applications, mobile DApp, cross-chain bridge, and strategic partnerships.

Risk Disclosure

Participation in any cryptocurrency project carries inherent risk. Please read and understand the following before participating.

- ▶ **Market Volatility:** cryptocurrency markets are highly volatile; token value can fluctuate significantly and may decline.
- ▶ **No Guaranteed Returns:** OSG does not guarantee profits, fixed income, or price appreciation. Reward and bond rates are participation incentives, not promises.
- ▶ **Smart Contract Risk:** despite verification and best practices, smart contracts may contain undiscovered vulnerabilities.
- ▶ **Regulatory Risk:** cryptocurrency regulations vary by jurisdiction and may change, potentially affecting the project.
- ▶ **Loss of Capital:** participation may result in partial or total loss of funds. Never participate with more than you can afford to lose.
- ▶ **Do Your Own Research:** always conduct independent research (DYOR) and consult qualified professionals.

Responsible Participation

OSG is designed as a participation-based utility ecosystem. Rewards are earned through genuine engagement — staking, bonds, governance, and community building. OSG explicitly avoids guaranteed-return or fixed-profit framing.

✓ participation rewards

✓ staking rewards

✓ bond incentives

✓ protocol incentives
